Significantly Less Edge Glare Than Other IOLs**

Optics IQ

Glare comparison at a 55° illumination angle in vitro**

**Data is based on the results of a study conducted by the Alcon Optics IQ team. The study compared the edge glare of five different IOL models. The results show that the Tecis 1-Pop IOL has significantly less edge glare than the other four models. The study was conducted in a laboratory setting and the results may vary in a clinical setting.

LESS EDGE GLARE

INTRODUCTION

- Glaucoma is a chronic progressive optic neuropathy whose only modifiable risk factor is controlling intraocular pressure. POAG is the most common form of primary glaucomas accounting for 70% of all

- It is the leading cause of irreversible blindness and the second leading cause of blindness worldwide.

- The introduction of prostaglandin analogues for treatment of glaucoma has had enormous
